Project 1 - Milestone 1

Application description: Concert "checklist" / "scrapbook" that keeps track of all of the concerts the user has been to. User enters the concert they went to, rates it, uploads photographs, and can write down memories from the concert. Can come back to app and look through the concerts they have been to like a scrapbook.

Intended audience: Whoever is a frequent concert goer is the audience for this app. This app allows them to remember the concerts they have been to in the past.

Inspiration: I have a box that I put in all of the concert tickets that I go to so I can remember which shows I've gone to. I also like to look back at pictures and remember fun things that happened at the concert.

Apps that already exist: I wasn't able to find an app does the same thing as the one I want to make. There are a lot of apps that displays what shows are happening in the user's area and allows users to RSVP and buy tickets to those shows, like BandsInTown. There is an app called Goodreads that keeps tracks of the books the user has read, which is what I want my app to do, except with concerts.
